Profile Summary

MCA student specializing in Generative AI with hands-on experience in Artificial Intelligence, Retrieval-Augmented Generation (RAG), Large Language Model (LLM) integration, automation, and full-stack web development. Skilled in building AI-powered applications and REST APIs using Python and modern AI tools, with experience developing practical solutions involving data processing, backend architecture, chatbots, WordPress plugin development, and intelligent automation. Proficient in Python, SQL, and AI/ML technologies, with strong problem-solving ability and self-directed learning.

Education

SRM Institute of Science and Technology

Master of Computer Applications (MCA) – Specialization in Generative AI

Ongoing

CGPA: 8.95

Gossner College, Ranchi, Jharkhand

Bachelor of Computer Applications (BCA)

CGPA: 7.84

Experience

Software Development Intern — Platlap Solutions

May 2026 – Jun 2026 (2 months)

- Contributed to the development of a Backtesting Tool for Indicators and Signals, supporting data collection, signal validation, and core tool development for technical stock-market indicators.
- Applied Python-based data processing and validation techniques to test indicator accuracy, gaining hands-on exposure to a professional software development workflow and collaborative project delivery.

AI Deployment & Automation Virtual Internship

Apr 2026 – May 2026 (8 weeks)

- Completed an 8-week virtual internship focused on AI deployment, automation pipelines, and applied machine learning workflows.
- Gained hands-on exposure to model deployment concepts, API-based AI integration, and automation-oriented solution design.

Projects

Indicator Validator Testing Tool

 GitHub

Tech Stack: Python, Pandas, NumPy, FastAPI, SQLite

- Built a tool to test and validate stock-market indicators, processing large historical OHLC datasets to evaluate indicator-based trading logic.
- Designed a structured, repeatable workflow with automated data cleaning and rule-based validation for experimenting with multiple indicators (e.g., RSI, MACD, Bollinger Bands) and ensuring accuracy of financial/technical calculations.

AI RAG Chatbot – WordPress Plugin

 GitHub

Tech Stack: PHP, WordPress Plugin API, Python, LLM APIs, RAG Pipeline

- Developed a custom WordPress plugin that embeds an AI-powered chatbot directly into a WordPress site, enabling automated, context-aware visitor support.
- Applied Retrieval-Augmented Generation (RAG) to ground chatbot responses in site-specific content, improving answer relevance over a standard LLM call, and packaged the workflow as an installable plugin.

WordPress Plugin Suite – Blogging & Event Logging

 Blogging /  Event Logging

Tech Stack: PHP, WordPress Plugin API, MySQL

- Built a custom WordPress blogging plugin extending core content management functionality for streamlined post creation and publishing workflows.
- Developed a WordPress event-logging plugin to track and record site/user activity for monitoring, auditing, and troubleshooting.

Technical Skills

Languages: Python, Java, SQL

Frameworks & Libraries: FastAPI, NumPy, Pandas, Pydantic, React

AI & Development: Generative AI, RAG (Retrieval-Augmented Generation), LLM Integration, Machine Learning, AI Automation, Prompt Engineering

Tools & IDEs: VS Code, PyCharm, Jupyter Notebook, Google Colab, Claude, Google AI Studio, Lovable, Antigravity, Git, GitHub, SQLite

Certifications & Achievements

HackOverFlow – CultRang '26, SRM Institute of Science and Technology

- Participated in a hackathon involving problem-solving, rapid prototyping, and collaborative software development.

AI Tools Workshop – be10x

January 21, 2024

- Completed a hands-on workshop exploring modern AI tools to improve productivity and problem-solving workflows.

Generative AI to Agentic AI: Exploring the Next Era with Microsoft Azure

- Explored the transition from Generative AI to Agentic AI and its practical applications using Microsoft Azure.
